

Ionic 2 w/ Firebase Workshop @ ngVikings 2017

Hi there,

This is Sam (Vloeberghs) & Sam (Verschuere), your workshop instructors for the upcoming workshop Ionic 2 w/ Firebase @ ngVikings on the 12th of February 2017.

First, we would like to **thank you to attend our workshop**. It's our pleasure to be teaching you some cool new stuff with Ionic 2 & Firebase.

Necessary preparations

To get the best experience possible we would like to ask you to do some preparation and install the necessary tools. You should have at least installed the following software:

- **Your preferred IDE**
We recommend at least Visual Studio Code or WebStorm. We will be using both WebStorm & VS Code to show the code.
- **Git, node.js and npm**
We recommend installing the latest node (v6.9.5) & npm (3.10.10). If you need other versions of node and npm you can use nvm to switch between versions.
- **The latest Ionic:**
If you had installed ionic beta or rc before you might need to uninstall first, before updating:

```
npm uninstall -g ionic cordova
```

```
npm install -g ionic cordova
```

We will also join the office hours at the conference at 14:50. Please feel free to come and ask some questions about Angular, Webpack, Ionic 2 and Firebase! We would be honored in trying to help you forward!

Cya soon and enjoy the conference ☺
